

## Window displays & fixtures

No more sticky tape to scrape off of the glass!

Changing window posters is now both safe and easy.

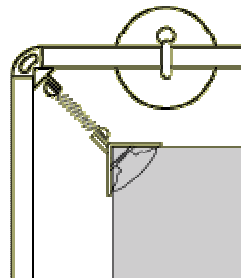

With our Clip-It system, posters can quickly and securely hang facing inside the store as well as outside the window with ease, and without any tools or messy tape!

They attach securely to your window using either our patented adjustable hooks or high vacuum suction cups

### 1. Large suction cups

Install your frames on windows simply and quickly with the suction cup's hook. This gives you the ability to take the sign on and off the window within seconds. Ideal for medium to large posters.

- **Maximum size:** 80 x 120 cm (A1)
- **Available with profile(s):** Square or octagonal, round (Rondofix), rectangular (Ecofix)
- **Tips:** Stick 2 suction cups on a clean and dry window. Simply hang the frame on the hooks. Do not wet the suction grips if exposed to the sun. Use a levelling tool to align.

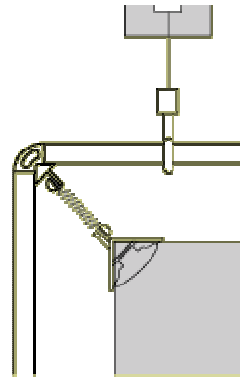

**No more sticky tape to scrape off of the glass!**

**Changing window posters is now both safe and easy.**

## 2. Adjustable hooks on nylon strings

Mount frames reliably and quasi-permanently with the suspension kit with adhesives. The main advantage is the possibility to adjust the height of the frame after installation.

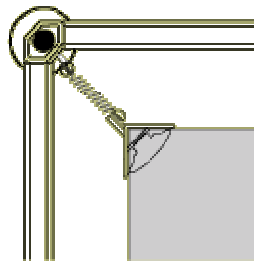

- **Maximum Size:** 100 x 200 cm
- **Available with profile(s):** Square or octagonal, round (Rondofix), rectangular (Ecofix)
- **Tips:** Stick the square part of the kit above the window. Adjust the height of the hook. Hang the frame on hooks. Use a levelling tool.

## 3. Small suction cups

Great and efficient solution to display small to medium sized posters with small extrusions. Very easy installation.

- **Maximum size:** 60 x 80 cm (A2)
- **Available with profile(s):** Round (Rondofix) or rectangular (Ecofix)
- **Tips:** Once the frame is assembled, place a suction cup in each corner with help from the plastic pins. Place the display on your window (make sure it is clean and dry).

**Whatever your display needs, we have the right **AFIX** system for you.**
